

User flows

Four flows that touch Google OAuth or the YouTube Data API — every YouTube call is the direct result of a user action

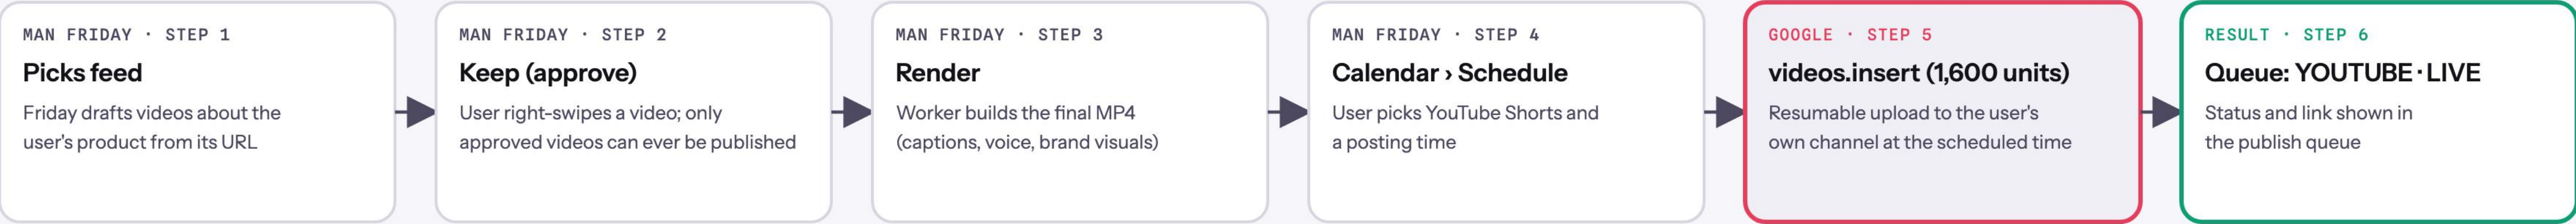

A · Connect a YouTube channel

GOOGLE OAUTH 2.0 · channels.list *1

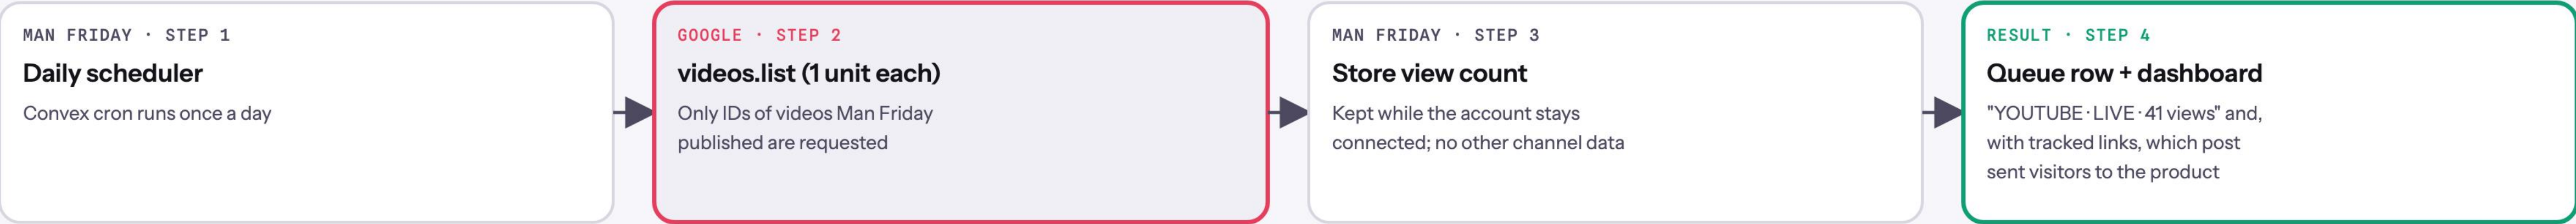

B · Approve and publish a Short

videos.insert *1 per approved video

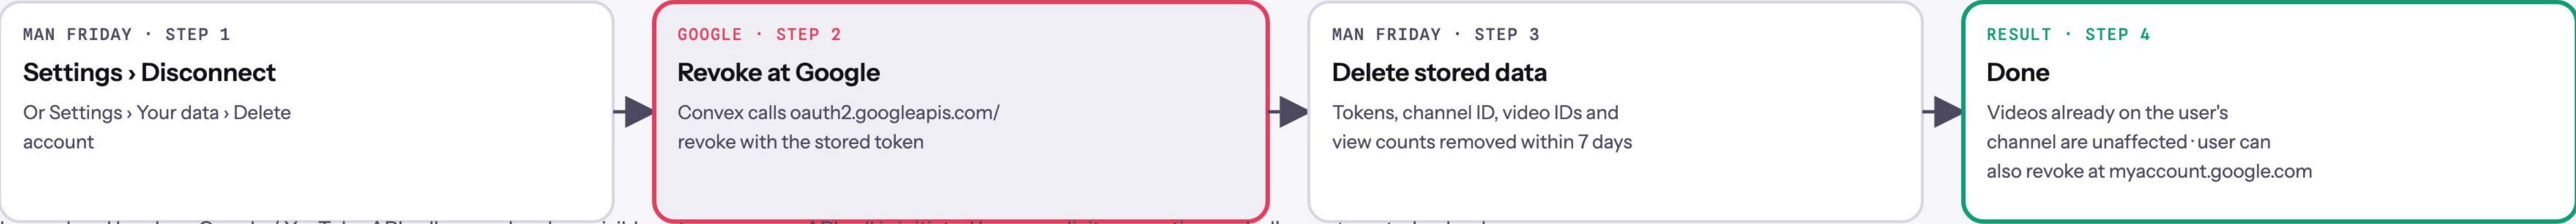

C · See how a published Short performed (next release)

videos.list *1 per published video per day

D · Disconnect or delete account

Google revoke endpoint · deletion within 7 days

Legend: red border = Google / YouTube API call · green border = visible outcome · every API call is initiated by an explicit user action; no bulk or automated uploads.
