5. Privacy Policy: YouTube API Services section, Google Privacy Policy link, revocation

YouTube

Man Friday uses **YouTube API Services** to let you publish videos to your own YouTube channel and to read how those videos perform. By connecting a YouTube account you also agree to the [YouTube Terms of Service](#), and Google's handling of your data is described in the [Google Privacy Policy](#).

What we access. Through the YouTube API we request two permissions: upload videos (youtube.upload) and view your YouTube account (youtube.readonly). We use them only to (1) upload a video you approved to the channel you connected, and (2) read the channel name, the IDs, and the view counts of the videos Man Friday itself published. We do not read your other videos, comments, subscribers, playlists, or any data about other channels.

What we store. Your OAuth access and refresh tokens (encrypted), your channel ID and name, and for each video Man Friday published: its YouTube video ID, title, publish time, and view count. View counts are refreshed at most once a day and kept only while the account stays connected. We never share YouTube data with third parties, never use it for advertising, and never sell it.

Revoking access. Disconnect YouTube any time in Settings → Connected accounts; we revoke the token at Google and delete the stored tokens and video metadata within 7 days. You can also revoke Man Friday's access from your [Google account permissions page](#). Videos already on your channel are unaffected either way.

TikTok

The same rules apply to a connected TikTok account: tokens are used only to publish what you approved and to read the performance of those posts, and disconnecting revokes the token at TikTok and deletes what we stored.

6. Privacy Policy: deletion policy

TikTok

The same rules apply to a connected TikTok account: tokens are used only to publish what you approved and to read the performance of those posts, and disconnecting revokes the token at TikTok and deletes what we stored.

Deletion and processors

Deletion. Settings → Your data → Delete removes your account, brand briefs, generated concepts, and disconnects social accounts. Posts already published to your own channels remain yours, on those platforms.

Processors. Data is processed by Clerk (authentication), Stripe (payments), Convex (database), Vercel (hosting), FAL and Sarvam (voice and video rendering), Anthropic (text generation from your brand brief), Resend (email), PostHog (product analytics), and Axiom (logs). Each processor receives only what its job needs.

Contact. Privacy questions and data requests: admin@manfriday.app. Man Friday is operated by Qash Solutions.
